

About Me

I'm a passionate **Android App Developer** with a strong foundation in software development, data structures, and web technologies. My technical expertise spans across multiple domains, allowing me to build efficient, user-friendly, and scalable applications.

I have in-depth knowledge of **Data Structures and Algorithms (DSA)** using **C, C++, and Java**, which forms the backbone of my problem-solving skills. From implementing complex algorithms to optimizing code performance, I consistently apply DSA principles in both competitive programming and real-world development projects.

As an Android developer, I specialize in building robust mobile applications using **Java** and **XML**, with a focus on clean architecture, intuitive UI/UX design, and seamless functionality.

In addition to mobile development, I also work as a **Web Architecture Enthusiast**, with hands-on experience in **HTML, CSS, and JavaScript**. I understand the structure and flow of modern web applications and enjoy crafting responsive, interactive web interfaces.

Whether it's developing dynamic Android apps, solving algorithmic challenges, or building modern web frontends, I'm always eager to learn, build, and grow in the field of software engineering.
